20C21034 Rishta Panchani

LIBRARIES USED:
Tkinter
Fpdf
Pandas
Mysql
OS

DESCRIPTION::
Our project is useful for creating multiple documents of the same type in one go.
It generates report cards (pdfs) for any educational institution.
To generate the report card, you have to perform the following steps:
1. Create an account for the teacher.

2. Sign in to that account with correct credentials.

3. Choose an excel file with the data (the data should be in a particular format).

4. The app generates report cards based on the input data.
5. Click on generate. This will generate a folder with all the report cards.

6. A student can create an account to view the report card.

CONCLUSION:
Hence, this application helps educational institutions to generate report cards in a fractional amount of time
